Welcome

To our 10th on property ram sale.

There has never been a better time to invest in your ram team than this year. With flocks down to core breeders it is truly a buyers market. We will be offering 90 catalogued rams with an average BLX index of 121.6, which is over 7 index points higher than the Border Leicester average. This is an indication of our commitment to breeding productive and profitable rams. We remain committed to being at the fore-front of technology adoption and application. To date we have genomically tested all sires used, and the 2014, 2015, 2016 and 2017 drop ewes. This allows more accurate selection of animals at a younger age for traits that are unable to be measured on-farm or until later in life, such as eating quality and reproduction respectively.

This year we have been particularly focused on setting a clear breeding objective for profit driving traits both currently and into the future. In this process we have identified that we are currently performing above average for carcass, eating quality, growth and fertility traits and we wish to extend our position in industry further into the future.

While we remain focused on the main productivity drivers we continue working with Gilgandra High School to show our sheep. We are proud to show the sheep we breed, but not breed sheep to show. We have had success at both local shows and the Dubbo NSW Sheep Show. You will find details of this success in the catalogue.

Remember you can follow us via our website **www.newarmatree.com.au** or on **Facebook**.

We belong to the Coonamble Biosecurity Area and rams are eligible for sale into all states.

Looking forward to seeing you on sale day,

Jenny and Craig Bradley

Please bring this catalogue with you on sale day.

NEW ARMATREE
— BORDER LEICESTERS —

'New Armatree' Health Record

'New Armatree' is within the
Coonamble Biosecurity Zone

Brucellosis Flock Accreditation No…..Cw 99/17
Expiry Date…..31/08/2019

Vaccinated with 6 in1 at marking and weaning
Last vaccination July 2018

Drenched with Pyramide October 2017

Shorn 10th June 2018

These rams have had a worm egg count on 16th
August 2018 and returned a zero egg count.

We recommend that you quarantine drench your
rams when you get them home, according to your
drench resistance and rotation program.

All rams have had no feet trimming,
feet are untouched.

Rams are presented in pens for sale
with no straw.

All Rams Vet inspected and checked:
Tuesday 11th September, 2018
by Dr Nadine Allan, Gilgandra Veterinary Clinic.

Memorandum of Sires used at 'New Armatree' in the 2017 Breeding Season

- **Two Dot Hurricane 2013/0429 (F7012)** A.I. Black disks
  Sire: Two Dot Twister 2011/0411 (F5165)

- **New Armatree 2014/0073 (F7994)** Purple disks
  Sire: New Armatree Aramis 2011/0205 (F5608)

- **Hanookra 2014/0132 (F7618)** Pink disks
  Sire: Hanookra 2011/0007 (F4902)

- **Jackson Smooth Criminal 2014/0095 (F7973)**
  Red disks
  Sire: Two Dot Tomahawk 2008/0460 (F1908)

- **New Armatree 2015/0026 (F7998**) Black disks
  Sire: Two Dot Hurricane 2013/0429 (F7012)

- **New Armatree 2015/0070 (F8919)** Blue disks
  Sire: New Armatree Australis 2013/0021 (F6059)

- **Gleneith 2015/0150 (F8498)** A.I. Green disks
  Sire: Gleneith 2013/0069 (F7279)

- **New Armatree 2016/0146** (F) Black disks
  Sire: New Armatree 2015/0026 (F7998)

- **Kegra 2015/0466 (F8943)** White disks
  Sire: Kegra 2013/0115 (F7364)

Sale Catalogue Averages and Trends

To assist you with your selection, we have included the following table which shows the catalogue average value for all traits along with the highest and lowest figure in the catalogue for that trait.

For your interest, we have also included the averages from the past two catalogues so you can monitor the genetic trends of the sale rams we present each year.

Catalogue	Bwt	Mwwt	Pwwt	Pfat	Pemd	NLW %	BLX
Highest 2018	0.6	2.6	11.4	1.0	2.1	19	135.2
Lowest 2018	-0.2	-1.1	3.3	-1.1	-1.2	3	113.0
Average 2018	0.3	0.3	7.1	-0.2	0.5	10.0	121.6
Average 2017	0.3	0.3	6.9	0.0	0.4	8.9	119.2
Average 2016	0.2	0.3	6.2	-0.1	0.4	6.4	116.1

The 2018 SuperBorder cut off BLX Index figure is 114.5. Those rams in the catalogue above 114.5, i.e. SuperBorders, are denoted by **SB** next to their BLX figure. Those ASBVs marked with an ***** indicate the animal is in the **top 20%** of the breed for that particular trait. If you would like to discuss these ASBVs further, please ask us on sale day.

Inside the back cover of the catalogue you will find a **Percentile Report**. On this report are a range of trait figures from the top of the breed to the bottom of the breed. The 50 percentile band is close to the average for the breed. Use this chart to check where animals fit within the breed for particular traits and index.

The BLX Index

This is a **Border Leicester Crossing Index** and has been designed by Lambplan to better reflect the desired traits for first cross ewe production.

Within the **BLX Index** there is more emphasis placed on the maternal traits such as maternal weaning weight and Number of Lambs Weaned (NLW) as well as early growth while capping adult ewe weights. The BLX Index cannot and should not be compared to the Maternal $ Index you might see in other publications.

Coloured Ear Tags and Disks

While all sale rams have white numbered ear tags (year of birth, white = 2017), you will also notice a coloured disk on the back of the tag. This coloured disk represents the ram's sire line. We use sires introduced from other studs as well as sires we have bred ourselves. They all carry the colour of the original introduced sire so we can easily identify which line they belong to. Listed below are the colours we have used for this drop of rams and the corresponding sire line. The sire line colours are also noted in the Memorandum of Sires.

Black = Two Dot   Red = Jackson   Purple = Cadell
Blue = Johnos   Pink = Hanookra   Green = Gleneith
White = Kegra

ASBV's

Australian Sheep Breeding Values

All ASBV's and Indexes used in this catalogue are based on the Sheep Genetics Australia Lambplan Maternal run on 15th August, 2018.

Bwt: Birth Weight – estimates the genetic difference between animals in live weight at birth. *Measured in kg.*

Mwwt: Maternal Weaning Weight – gives an estimate of the female progeny's potential to provide a good maternal environment for her lambs (includes milking ability). *Measured in kg.*

Pwwt: Post Weaning Weight – gives an estimate of the genetic difference in live weight gain between weaning and 8 - 10 months of age. A good indicator of the progeny's ability to grow after weaning to market weights. *Measured in kg.*

Pfat: Post Weaning Fat – estimate of the genetic difference in fat depth at 8-10 months of age. *Measured in mm.*

Pemd: Post Weaning Eye Muscle Depth – estimate of the genetic difference in eye muscle depth at the C site (loin) at 8-10 months of age. *Measured in mm.*

NLW: Number of Lambs Weaned (%) – estimates the genetic difference between female progeny of a ram for the number of lambs weaned at each lambing opportunity. *Expressed as a percentage of the average of animals in the database in 1990.*

BLX Index: Border Leicester Crossing Index – indicates the value of an animal based on its suitability for first cross ewe production. *The BLX Index is comprised of ASBVs focussing on maternal and growth traits.*

For more information or advice, please ask prior to, or on sale day.

$uperBorder$® is the brand name for Border Leicester rams that are of high genetic merit in maternal traits such as fertility, milk yield, weaning weight and growth rate.

$uperBorder$ rams are easily identified by their official yellow $uperBorder$ button ear tags.

$uperBorder$ Inc. is made up of 15 Border Leicester studs from four states who have realised that selling rams on visual appearance alone may favour early born, well fed single animals, but by using genetic evaluation provided by Lambplan, late born multiples are able to have their genetic potential revealed.

Rams that are marketed as $uperBorder$ are rams that are above average for the breed, based on the BLX Index figure on the 15th August Lambplan run each year. Not all rams sold by $uperBorder$ members are necessarily $uperBorder$, but you can be assured, they are bred by committed, registered breeders striving for strong genetic gain. $uperBorder$ rams must be structurally correct and of good breed type.

$uperBorder breeders are required to maintain links through the use of common sires. This is usually achieved through AI programs and participation in Sheep CRC research flocks. By having progeny by common sires run in different environments and under different management regimes, Lambplan is able to isolate the genetic factors from the environmental ones and calculate accurate and meaningful ASBV's (Australian Sheep Breeding Values).

First Cross lambs sired by 100% $uperBorder$ rams may be sold as "Bred from $uperBorder$". Special yellow pen cards and $uperBorder$ ear tags are available to identify these animals. Talk to us for more information on these products.

Ewe Tag 2 with her triplets. She weaned 75kg of lamb, and weighed in at 68kg herself at the time.

New Armatree first cross ewe lambs, January 2018.

Ram lambs, genomic tested late 2017.
