

**NEW ARMATREE**  
BORDER LEICESTERS

# 16th on Property Ram Sale

---

**Thursday, September 12, 2024**  
**100 Flock Rams**

**ACCREDITED**  
**Brucellosis Free**

[www.newarmatree.com.au](http://www.newarmatree.com.au)

# **NEW ARMATREE 16th ON PROPERTY FLOCK RAM SALE**

**Thursday 12th September**

**Offering 100  
Performance Recorded  
Vet Checked Rams  
Flock Number 4786**

**Inspection from 11am  
Complimentary lunch 12noon  
Auction 1pm**

Auction will be fully interfaced with AuctionsPlus

**Breeding Advisor:  
Ash White 0411 139 654**

*Welcome,*

To our 2024 sale catalogue. This group of our top 100 rams has been selected from over 300 rams born in 2023. Physically and genetically, we are happy with the result of where this group of sheep sit within their cohort and across the industry with regard to the BLX or Border Leicester Crossing Index. Our genetic gain continues to build year on year and this is reflected in the Catalogue Averages table within this catalogue.

Foot scoring continues to provide a benchmark on keeping only the sound animals for sale and breeding. The table we use for selection can also be found within this catalogue and all Lots presented have a foot score. Foot and toe configuration contributes to the longevity of your ram and ram team and is an important aspect of our selection. No rams have had their feet trimmed and are presented in pens with no straw so you can inspect feet and legs easily.

Driving the production traits that return dollars invested has seen clients achieving some great sale results. The dressing percentages of our home bred First Cross lambs OTH has hit 50%, and we couldn't be happier. We consider the first cross has to be a dual purpose animal and in years like we have just had, where the ewes have been worth meat value, this becomes an important point. To compete with a terminal, the Border Leicester has to do both – Maternal (1st X ewe) and OTH, with solid dressing percentages.

Don't forget if you are selling merino ewes scanned in lamb to NA rams, store stock sired by NA rams or First X ewes and have a ram team consisting of 85% NA rams you can use the "Sired By" Logo.

All Rams will be vet checked on the 10th September, two days prior to the sale. Dr Nadine Allan will perform that check. A certificate of the vet check will be on display at the registration table on sale day.

*Craig, Jack and Jenny*

**Please bring this catalogue with you on Sale Day.**

# New Armatree Health Record

Brucellosis Flock Accreditation No. 76395

Expiry Date: 30th September, 2025

OJD Pooled Faecal Culture

Negative result 24th January, 2023

Vaccinated with 6 in 1 at marking and weaning

Last vaccination: 19th August 2024

Drenched: 10th June

Faecal Egg count conducted on  
the 13th August 2024

Result = 75 EPG

However, we still recommend that you quarantine drench your rams when you get them home, according to your drench resistance and rotation program.

**No Toes** have been trimmed on our sale rams.

All sale rams are foot scored -  
See explanation in this catalogue.

Rams are presented in pens for sale with no straw.

All rams Vet inspected and checked  
Tuesday, 10th September, 2024  
By Dr Nadine Allan, Gilgandra Veterinary Clinic

4% rebate to outside Agents  
accompanying clients and settling  
on their behalf within 7 days.

# Sale Catalogue Averages and Trends

To assist you with your selection, we have included the following table which shows the catalogue averages for 2022, 2023 and 2024, enabling you to monitor the genetic trends of the sale rams we present each year. We are pleased with the trends and the Genetic Gain the stud has achieved.

Catalogue	Bwt	Mwwt	Pwt	Pfat	Pemd	WR	BLX
Average 2022	0.21	0.64	9.29	0.61	1.41	0.14	139.9
Average 2023	0.29	0.76	10.89	0.65	1.27	0.18	147.0
Average 2024	0.35	0.97	11.68	0.81	1.53	0.18	150.4

**The ASBVs presented in this catalogue are based on 15th August, 2024 Lambplan run.** All rams in this catalogue are well above breed average for BLX. In fact, **the catalogue average for BLX Index is 150.4 which is in the top 10% for the breed.** The rams will have a coloured button behind their Lot Number tag. This button indicates which percentile band the ram falls into in relation to their BLX Index. Within the catalogue, ASBVs and BLX Index are also shaded according to percentile.

	Pink shading or button = Top 5%
	Blue shading or button = Top 10%
	Green shading or button = Top 20%
	White button = Top 25%

At the back of the catalogue, you will find a **Percentile Report** (dated 15th Aug, 2024). On this report are a range of trait figures from the top of the breed to the bottom of the breed. The 50-percentile band is close to the average for the breed. Use this report to check where animals fit within the breed for particular traits and BLX index.

## The BLX Index

This is a Border Leicester Crossing Index and has been designed by LAMBPLAN to better reflect the desired traits for first cross ewe production. Within the BLX Index there is more emphasis placed on the maternal traits such as maternal weaning weight and Weaning Rate (WR) as well as early growth while capping adult ewe weights. The BLX Index cannot and should not be compared to other indexes used within the industry that you may see in other catalogues. We report the BLX index as this most accurately reflects our client's production systems. It is the only index that should be used when comparing Border Leicester rams across flocks that are to be used for FX Ewe production. There have been Analysis Enhancements made by Sheep Genetics in the last four months and ASBVs and Index figures have changed from previous years. Please use the Percentile Report provided to benchmark your potential purchases.

# Understanding the Traits in the Catalogue (ASBVs)

All Australian Sheep Breeding Values (ASBVs) used in this catalogue are based on the Sheep Genetics LAMBPLAN Maternal analysis from 15 th August, 2024.

Abbreviation	Trait	Units	Description
BWT	Birth weight	kg	Genetic difference in liveweight at birth of a sires progeny
MWWT	Maternal Weaning weight	kg	Genetic difference in a sires female progeny's ability to provide a good maternal environment
PWT	Post weaning weight	kg	Genetic difference in live weight at approximately 9 months of age of a sires progeny
PFAT	Post weaning fat depth	mm	Genetic difference in fat depth at 9 months of age of a sires progeny
PEMDe	Post weaning eye muscle depth	mmr	Genetic difference in eye muscle depth at the loin at 9 months of age of a sires progeny
WR	Weaning rate	Lambs per ewe joined	Estimates the genetic difference between female progeny of a sire for the number of lambs present at weaning
BLX	Border Leicester Crossing Index		Indicates the relative value of an animal based on its suitability for first cross ewe and wether production
Acc	Accuracies	%	Are a reflection on the amount and quality of information available used to calculate ASBVs for each animal. Accuracies are important but are more relevant to people purchasing stud rams.

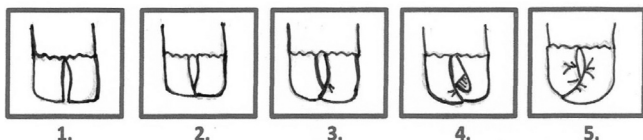

For more information on individual ASBVs and Indexes please visit [genetics.mla.com.au](https://genetics.mla.com.au)

Please remember that it is the average of your ram team that is more important than the absolute values for each individual ram.

Selecting rams with suitable ASBVs for individual traits (according to your breeding objectives), may be better than selecting rams with a high BLX index. The important thing to remember is that your new rams should have a better average than your existing ram team. If this is true, then your ram team is improving year on year.

# New Armatree Foot Scoring Guide

**1.** Ideal – Short and sharp – this is NA’s objective on 4 feet for every sheep bred.

**2.** Acceptable for sale catalogue and commercial rams. A slightly longer toe with weight distributed evenly.

**3.** Toe is longer than illustrated in 2, weight is even but possibly will need trimming with age.

\*NB in 1,2 and 3 weight is born square over the claws, so structurally strong but with varying degrees of curl in the toe.

**4.** Uneven claw set, larger amount of claw separation, only acceptable for industry use with trimming.

Weight not born squarely on both claws so foot starts to deform eg turns in or out, rolls or clubby.

**5.** Uneven claw set and foot is distorted because of uneven bearing of weight and toes subsequently are distorted – these sheep are culls.

## Additional information

Foot scoring at New Armatree occurs twice before being offered for sale.

Rams listed in the annual sale catalogue must be either a 1 or 2.

During a ram’s life time, feet care and toe trimming may be required to maintain performance.

## Catalogue Foot Scoring Guide

In the catalogue you will notice within the table of each lot a foot score.

F = Front toe and B= Back toe

These scores refer to the foot scoring guide presented above.
